

AQUATIMER

Save water,
energy &
money

Smart &
economical
showering

In practice

Set your time

Turn on the shower tap

The water flow stops when
the time has elapsed

Turn off the shower tap

The AQUATIMER works on spring force (no batteries required).
And by setting the time again a slightly longer shower is possible.

Shower more sustainably

Do you unknowingly shower longer than you actually want? Would you like to use water and energy more sustainably? The AQUATIMER helps you do this. Use the rotary knob for determining how long you want to shower. The flow of water stops automatically when the set time has elapsed. Smart and simple.

Good for your wallet

On average, we shower for 7½ minutes each time, using 57 litres of heated drinking water (source: CBS – Dutch National Agency for Statistics). Given the scarcity of drinking water and energy, it is better to shower for only 5 minutes. This saves a 4-person household around €250 per year. Good for your wallet!

Environmentally conscious

With the AQUATIMER you shower for less time and save water and energy. This is better for the environment. The AQUATIMER is also designed in such a way that the various parts can be recycled. Very environmentally conscious.

Quick and easy connecting

Place the AQUATIMER easily yourself (without tools) between the mixer tap and the shower hose.

Specifications

TIME INTERVAL	0 ... 15 minutes (up to 12 marked)
WATER PRESSURE	0.5 ... 5 bar
TEMPERATURE	60 °C maximal
DIMESIONS	73 x 54 x 84 mm (h x w x d)
CONNECTIONS	½" / G½ (standard shower connections)
